

# Light gauge metal containers — Definitions and determination of dimensions and capacities —

## Part 3: Aerosol cans

The European Standard EN ISO 90-3:2001 has the status of a  
British Standard

ICS 55.120; 55.130

**NO COPYING WITHOUT BSI PERMISSION EXCEPT AS PERMITTED BY COPYRIGHT LAW**

# National foreword

This British Standard is the official English language version of EN ISO 90-3:2001. It is identical with ISO 90-3:2000. It supersedes BS EN 20090-3:1993 which is withdrawn

The UK participation in its preparation was entrusted by Technical Committee PKW/5, Primary and transport packaging, to Subcommittee PKW/5/22, Metal packaging, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep the UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this committee can be obtained on request to its secretary.

### Cross-references

The British Standards which implement international or European publications referred to in this document may be found in the BSI Standards Catalogue under the section entitled “International Standards Correspondence Index”, or by using the “Find” facility of the BSI Standards Electronic Catalogue.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

**Compliance with a British Standard does not of itself confer immunity from legal obligations.**

### Summary of pages

This document comprises a front cover, an inside front cover, the EN ISO title page, the EN ISO foreword page, the ISO title page, pages ii to v, a blank page, pages 1 to 13 and a back cover.

The BSI copyright date displayed in this document indicates when the document was last issued.

This British Standard, having been prepared under the direction of the Consumer Products and Services Sector Policy and Strategy Committee, was published under the authority of the Standards Policy and Strategy Committee on 28 August 2001

English version

## Light gauge metal containers - Definitions and determination of dimensions and capacities - Part 3: Aerosol cans (ISO 90-3:2000)

Réipients métalliques légers - Définitions et détermination des dimensions et des capacités - Partie 3: Boîtiers pour aérosols (ISO 90-3:2000)

Verpackungen aus Feinstblech - Begriffe und Verfahren zur Bestimmung von Abmessungen und Volumen - Teil 3: Aerosoldosen (ISO 90-3:2000)

This European Standard was approved by CEN on 29 June 2001.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

## **Foreword**

The text of the International Standard from Technical Committee ISO/TC 52 "Light gauge metal containers" of the International Organization for Standardization (ISO) has been taken over as an European Standard by Technical Committee CEN/TC 261 "Packaging", the secretariat of which is held by AFNOR.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by February 2002, and conflicting national standards shall be withdrawn at the latest by February 2002.

This European Standard replaces EN 20090-3:1992.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom.

## **Endorsement notice**

The text of the International Standard ISO 90-3:2000 has been approved by CEN as a European Standard without any modification.

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this part of ISO 90 may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

International Standard ISO 90-3 was prepared by Technical Committee ISO/TC 52, *Light gauge metal containers*, Subcommittee SC 6, *Aerosol containers*.

This second edition cancels and replaces the first edition (ISO 90-3:1986) which has been technically revised.

ISO 90 consists of the following parts, under the general title *Light gauge metal containers — Definitions and determination of dimensions and capacities*:

- *Part 1: Open-top cans*
- *Part 2: General use containers*
- *Part 3: Aerosol cans*

**NOTE** An "open-top can" is a can one end of which is double-seamed after filling. A "general use container" is a container which is sealed after filling with a closure that need not be double-seamed.

Annex A of this International Standard is for information only.

## Introduction

ISO 90 consists of three parts which group definitions, methods of determination of dimensions and capacities, as well as tolerances and designations of rigid containers made of metal with a maximum nominal material thickness of 0,49 mm.

# Light gauge metal containers — Definitions and determination of dimensions and capacities —

## Part 3: Aerosol cans

### 1 Scope

This part of ISO 90 defines the diameters, apertures, constructions, shapes and capacities of round, aerosol cans. It specifies methods for determining diameters, gross lidded and brimful capacities. It also gives tolerances on capacity and recommends an international designation.

NOTE A list of standards dealing with materials used for aerosol cans is given in the Bibliography.

### 2 Terms and definitions

For the purposes of this part of ISO 90, the following terms and definitions apply. The figures given in this clause illustrate the terminology.

#### 2.1

##### **aerosol can**

rigid can made of light gauge metal with a maximum nominal material thickness of 0,49 mm; non-refillable can intended to contain a product which is dispensed by pre-stored pressure in a controlled manner through a valve

#### 2.2 Heights

##### 2.2.1

##### **body height**

$H_1$

height of the body over the double seams (three piece aerosol cans only)

See Figure 1 a).

##### 2.2.2

##### **overall height**

$H_3$

height of the unclosed container

See Figures 1 a) and 1 b).

a) Body and overall heights

b) Overall height

Figure 1 — Heights

### 2.3

#### **aperture**

circular opening designed to be sealed by a valve component of which the valve is located in a valve cup

### 2.4 Constructions

#### 2.4.1

##### **three-piece can**

can made from three main components: body, top end and bottom end

See Figure 2.

Figure 2 — Three-piece can

## 2.4.2

### **two-piece can**

(extruded or drawn and wall-ironed) can made from two main components: the body and top end or the body with bottom end

See Figure 3.

a) Extruded body with bottom (one piece) and top end

b) Drawn and wall-ironed body with shoulder on top (one piece) and bottom end

**Figure 3 — Two-piece can**

**2.4.3****monobloc can**

extruded or drawn and wall ironed one-piece can for which a variety of shoulders exists

See Figure 4. Typical shoulders are shown in Figures 4 b) to 4 f).

a) Monobloc can

b) Ogival shoulder

c) Ogival shoulder with reduced opening

d) Spherical shoulder

e) Flat shoulder

f) Shaped shoulder

**Figure 4 — Monobloc can**

## 2.5 Shapes

### 2.5.1

#### straight-sided can

can which has a constant diameter from top to bottom, local variations caused by special features being disregarded

See Figure 5.

Figure 5 — Straight-sided can

**2.5.2****necked-in can**

can which has a body reduced diameter at one [see Figures 6 a) and 6 b)] or both [see Figure 6 c)] ends

**Figure 6 — Necked-in can**

**2.6 Capacities****2.6.1****gross lidded capacity**
 $C_1$ 

total capacity of a can, fitted with a valve, valve cup and dip tube

NOTE Gross lidded capacity is expressed in millilitres.

**2.6.2****brimful capacity**
 $C_2$ 

total capacity of a can without a closure, determined according to 4.2

NOTE Brimful capacity is expressed in millilitres.

**3 Determination of dimensions****3.1 Measurement of diameters**

**3.1.1** Measure the internal body diameter using a plug gauge or derive it from the external diameter.

**3.1.2** Measure the external body diameter using a vernier calliper.

**3.1.3** Measure the necked-in diameter using a plug gauge applied to the internal diameter of the extremity to which the end is to be fixed.

## 3.2 Measurement of height

Measure the body height and/or the overall height using a vernier calliper or a height gauge.

## 3.3 Nominal dimensions

NOTE Annex A gives information on the dimensions of the top end of three-piece necked-in tinplate cans.

### 3.3.1 Nominal diameters

#### 3.3.1.1 Determination

The nominal diameter is determined by rounding the body or necked-in diameter to the nearest whole millimetre (if the first decimal is 5 or above, round up; in all other cases, round down).

#### 3.3.1.2 Characteristic dimensions

##### 3.3.1.2.1 Aerosol cans

Internal diameter  $D_i$  [see Figure 7 a)].

External diameter  $D_e$  [see Figure 7 b)].

Figure 7 — Diameters

##### 3.3.1.2.2 Necked-in cans

Diameter(s)  $D_{N1}$  and/or  $D_{N2}$  (see 2.5.2 and Figure 6).

### 3.3.2 Nominal height

The nominal heights  $H_1$  or  $H_3$  shall be expressed by rounding the height to the nearest whole millimetre (if the first decimal is 5 or above round up; in all other cases, round down).

## 4 Determination of capacities

### 4.1 General

The methods for determining capacities all rely on obtaining the mass of water in the can. For cans with a capacity equal to or greater than 400 ml, a correction factor (see 4.1.1) may be applied, but only if a very precise determination of capacity is necessary.

#### 4.1.1 Temperature-dependent correction factor

Table 1 gives the values of correction factors for the determination of capacity with respect to the temperature of water.

Table 1 — Correction factors

Water temperature °C	Correction factor <i>F</i>
12	1,000 5
14	1,000 8
16	1,001 1
18	1,001 4
20	1,001 8
22	1,002 2
24	1,002 7
26	1,003 3
28	1,003 8
30	1,004 4

#### 4.1.2 Accuracy of balances

The scales used for weighing the cans shall not exceed the values of accuracy specified in Table 2.

Table 2 — Balance accuracy

Mass of can <i>m</i> g	Accuracy g
$m \leq 50$	$\pm 0,2$
$50 < m \leq 500$	$\pm 0,5$
$500 < m$	$\pm 1,0$

### 4.2 Determination of brimful capacity, $C_2$

**4.2.1** Close the can with a rigid disc of transparent plastic with two holes, 3 mm in diameter and about 7 mm apart, or one hole, 6 mm in diameter.

**4.2.2** Determine the mass of the empty can together with the disc,  $m_{d1}$ , in grams, as accurately as possible (see 4.1.2).

**4.2.3** If necessary, measure the temperature of the water to be used (see 4.1.1).

**4.2.4** Fill the can with water, avoiding air bubbles.

**4.2.5** Close the can with the disc, the hole(s) in the disc being as close as possible to the edge of the aperture, and complete filling through the holes. The can should be shaken, if necessary, during the filling process to ensure the release of any trapped air.

**4.2.6** Remove any surplus water from the outside of the can.

**4.2.7** Determine the mass of the filled can together with the disc,  $m_{d2}$ , in grams, as accurately as possible (see 4.1.2).

**4.2.8** The difference between the weighings,  $(m_{d2} - m_{d1})$ , if necessary multiplied by the relevant correction factor (see 4.1.1), represents the brimful capacity,  $C_2$ , in millilitres, of the can.

## 5 Tolerances on capacities

### 5.1 General

For standardized capacities, tolerances are as given in Table 3.

At least 99,7 % of the individual cans shall lie within these limits<sup>1)</sup>.

### 5.2 Tolerances

Tolerances for gross lidded or brimful capacities are given in Table 3.

**Table 3 — Tolerances on capacities**

Gross lidded, $C_1$ or brimful capacity, $C_2$ ml	Tolerances	
	%	ml
< 80	± 5	
80 to 100		± 4
101 to 150	± 4	
151 to 200		± 6
201 to 430	± 3	
431 to 650		± 13
651 to 1 000	± 2	
1 001 to 1 400		± 20

<sup>1)</sup> This percentage is derived from statistical theory: when a variable,  $x$  is distributed according to a normal distribution of parameters  $\mu$  and  $\sigma$  (where  $\mu$  is the arithmetical mean and  $\sigma$  is the standard deviation), 99,7 % of its values are between  $(\mu - 3\sigma)$  and  $(\mu + 3\sigma)$ .

## 6 Designation

It is recommended that aerosol cans be designated internationally in the following manner:

- a) their nominal brimful capacity,  $C_2$ , expressed in millilitres;
- b) their nominal diameters, expressed in millimetres, in accordance with 3.3.1;
- c) their height, expressed in millimetres, in accordance with 2.2 and 3.3.2.

### EXAMPLES

#### Tinplate aerosol cans:

Cylindrical (straight-sided) cans

$$C_2 - D_i - H_1$$

Necked-in cans (only top end)

$$C_2 - D_i/D_{N1} - H_1$$

Necked-in cans (only bottom end)

$$C_2 - D_i/D_{N2} - H_1$$

Necked-in cans (both ends)

$$C_2 - D_i/D_{N1}/D_{N2} - H_1$$

#### Aluminium aerosol cans:

Monobloc cans

$$C_2 - D_e - H_3$$

## Annex A (informative)

### Dimensions of the top end of three-piece necked-in tinplate cans

See Figure A.1 for dimensions of the top end of three-piece necked-in tinplate cans.

#### Key

- $h$  Height of the seam
- $D_1$  External diameter of the seam
- $H_2$  Height of the top end
- $H_5$  Height of the neck
- $D_i$  Internal diameter of the body

Figure A.1 — Top end of three-piece necked-in tinplate can

## **BSI — British Standards Institution**

BSI is the independent national body responsible for preparing British Standards. It presents the UK view on standards in Europe and at the international level. It is incorporated by Royal Charter.

### **Revisions**

British Standards are updated by amendment or revision. Users of British Standards should make sure that they possess the latest amendments or editions.

It is the constant aim of BSI to improve the quality of our products and services. We would be grateful if anyone finding an inaccuracy or ambiguity while using this British Standard would inform the Secretary of the technical committee responsible, the identity of which can be found on the inside front cover.  
Tel: 020 8996 9000. Fax: 020 8996 7400.

BSI offers members an individual updating service called PLUS which ensures that subscribers automatically receive the latest editions of standards.

### **Buying standards**

Orders for all BSI, international and foreign standards publications should be addressed to Customer Services. Tel: 020 8996 9001. Fax: 020 8996 7001. Standards are also available from the BSI website at <http://www.bsi-global.com>.

In response to orders for international standards, it is BSI policy to supply the BSI implementation of those that have been published as British Standards, unless otherwise requested.

### **Information on standards**

BSI provides a wide range of information on national, European and international standards through its Library and its Technical Help to Exporters Service. Various BSI electronic information services are also available which give details on all its products and services. Contact the Information Centre.  
Tel: 020 8996 7111. Fax: 020 8996 7048.

Subscribing members of BSI are kept up to date with standards developments and receive substantial discounts on the purchase price of standards. For details of these and other benefits contact Membership Administration.  
Tel: 020 8996 7002. Fax: 020 8996 7001. Further information about BSI is available on the BSI website at <http://www.bsi-global.com>.

### **Copyright**

Copyright subsists in all BSI publications. BSI also holds the copyright, in the UK, of the publications of the international standardization bodies. Except as permitted under the Copyright, Designs and Patents Act 1988 no extract may be reproduced, stored in a retrieval system or transmitted in any form or by any means – electronic, photocopying, recording or otherwise – without prior written permission from BSI.

This does not preclude the free use, in the course of implementing the standard, of necessary details such as symbols, and size, type or grade designations. If these details are to be used for any other purpose than implementation then the prior written permission of BSI must be obtained.

If permission is granted, the terms may include royalty payments or a licensing agreement. Details and advice can be obtained from the Copyright Manager.
